Posterior Predictive Check Model-predicted lines should resemble observed data line 0.04 0.03 Density 0.02 0.01 0.00 80 100 120 bp mean Observed data — Model-predicted data

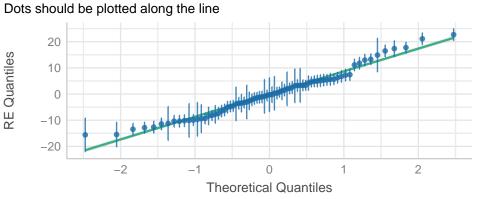

Collinearity High collinearity (VIF) may inflate parameter uncertainty

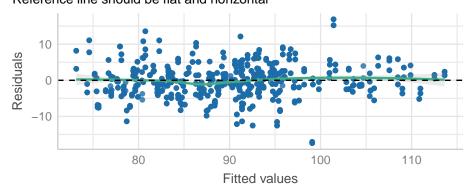

Normality of Random Effects (record_id)

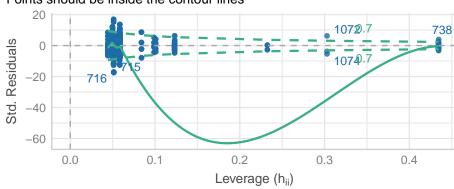

Linearity Reference line should be flat and horizontal

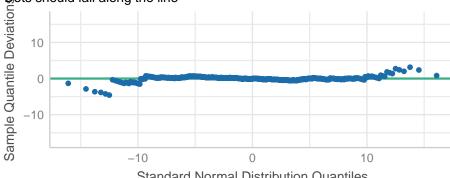

Influential Observations

Points should be inside the contour lines

Normality of Residuals

Dots should fall along the line

Standard Normal Distribution Quantiles
