# Posterior Predictive Check Model-predicted lines should resemble observed data line 0.6 Density 0.4 0.2 0.0 10 log1p(phase\_angle)

## Homogeneity of Variance

Reference line should be flat and horizontal

Observed data — Model-predicted data

### Collinearity

√|Std. residuals

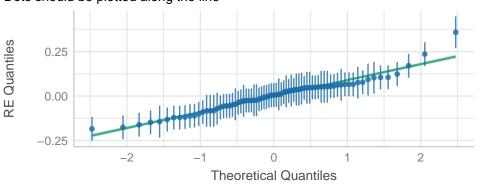

High collinearity (VIF) may inflate parameter uncertainty

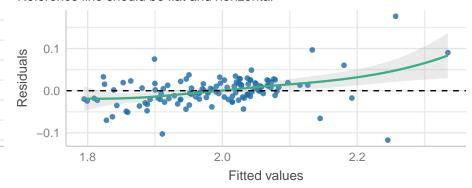

# Normality of Random Effects (record\_id)

Dots should be plotted along the line

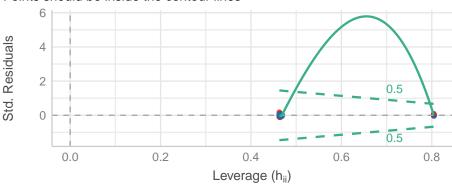

#### Linearity

Reference line should be flat and horizontal

#### Influential Observations

Points should be inside the contour lines

### Normality of Residuals
